

## Rear End Crashes 2009-2013 Buckeye Hills Region - Top Four Crashes

● Crash Location

Note: Rear end crashes are the third most prevalent in the Buckeye Hills region at 2,782 total crashes between 2009-2013. This data was accessed through ODOT GCAT, which is processed OH-1 data. Even though animal collisions were the second most prevalent, they were left out of this as there are no known ways to deter them.

Data Sources: US Census Bureau, ODOT
